

Join us for the first
Variable Charge Soils Conference
since 1991!

04 - 06 March 2026

Newcastle, NSW

Please join us as launch crcCARE's first Variable Charge Soils Conference. It is now more than three decades since the last known conference on variable charge soils and we think it very timely to refocus on these less-well-understood soils. We are hoping to bring together researchers, soil scientists, engineers, developers, policymakers and land managers from across the globe to share insights, discuss current challenges and develop innovative solutions for sustainable soil management.

The current topics we intend to address and have a keynote speaker on are:

- Pedogenesis and Distribution
- Chemistry and Mineralogy
- Nutrient Interactions
- Synergistic Nutrient Dynamic and Agronomic Strategies
- Soil Physical Properties, Water Management and Hydrological Dynamics
- Contamination Interactions and Risk Management
- Slope Instability
- Variable Charge Soils and Carbon Sequestration
- Dynamic Nature of Variable Charge Soils and Ecosystem Impacts
- Climate Change and Ecosystem Sustainability with Variable Charge Soils

Visit <https://2026variablechargesoilconference.com> for more information on how you can partake in the commencing year of this conference!
